

# INDEX

Introduction	1	<b>3. Controllability and Consistency</b>	33
Assumed reader’s background	2	Controllability	33
Author’s background	3	Handling interactions	36
Dedications	6	Case study: 1990 Corvette ZR-1	37
Motorsports principles	7	Consistency	38
<i>Fast</i> Fundamentals and <i>Fast</i> Physics	7	<b>4. Grip Limits</b>	41
<b>Fast Fundamentals</b>	8	New tires	42
<b>1. Reliability</b>	9	Downforce is grip	43
Race track tolerance	10	Balance is grip	44
Big-picture priorities	11	<b>5. Weight and Balance</b>	46
After the Spin	11	Every ounce counts	47
The Dog that Didn’t Bark	12	Weight reduction targets	47
<b>2. Driver development</b>	13	Ballast	48
Training wheels	15	Pick-up	48
What’s the Plan, Man?	15	Center of gravity height	49
Cheap seat time	15	Front to rear weight bias	49
Head game	16	<b>6. Corner Exit Acceleration</b>	50
Imaginary speed	16	Acceleration potential	50
Why am I doing this?	17	The fast line	51
Risk management	18	Diff’s	52
Turning cash into fun	19	Reshaping the friction circle	53
Bring money	20	Cornering balance compromise	53
Skill sets	20	<b>7. Track-Specific Setup</b>	55
Driving	20	Aero setup	56
Racing	21	Setting downforce level	57
Right of way	22	Rain setup	57
Qualifying	23	Philosophy break	59
Starting	23	<b>8. Power to Weight Ratio</b>	60
Keep the hammer down	23	<b>9. Myths, Superstitions, and Cheating</b>	62
Slip control	24	Myths	62
Grip quest	24	Superstitions	63
Sailing the black lake	25	Cheating	63
Driving for data	25	<b>Fast Physics</b>	64
Plateaus and patterns	26	<b>10. Tire Behavior</b>	65
Development driving	27	Training shoes	67
Race driving	27	<b>11. Tire Load Proportions</b>	68
Whoa, horsey!	28	One tire in isolation	68
Left foot braking	29	All together now	69
Brake slam	29	Mechanical and aero load interactions	69
Brakes are tire heaters	29	Droop limiters	70
Brake bias adjustment	30	Monoshock suspension	71
Brake heat flow	30	Third and fourth springs	71
Bigger is not better	32	Fully independent suspension	72

## Index

Balance versus speed	72	Steering ratio	120
Spring rate measurement	73	Rear pivot point plane	120
Blade-type anti-roll bars	75	Tripod joint angles	120
Anti-roll bar blade characteristics	75	<b>15. Suspension Alignment</b>	123
Virtual setup analysis model	77	Alignment equipment	123
Asymmetric setup effects	79	“Setup pad”	124
Torsional stiffness testing	80	Lever-pivot scales	126
Stiffness improvement: tube frames	82	Camber gauge	127
Monocoque tubs	83	Caster gauge	127
Semi-monocoque tubs	84	Tilt gauge	128
Should I?	84	Steering rack lock	128
<b>12. Suspension Stiffness</b>	85	Steer plates	128
The death rattle of the pullrod	86	Toe strings	128
Toe stiffness	87	Needle probe tire pyrometer	129
The other four degrees of freedom	87	Hand held infrared temperature gun	130
Double wishbones or live axles?	88	Nitrogen necessary?	130
<b>13. Fun With Dampers</b>	89	Setup order	131
Adjustable Dampers 201: What’s Inside?	90	Diagonal balancing	131
Damper Internals	90	Inertial cross terms	132
Oil flow case 1: fixed orifice flow	94	Turn radius effects on toe settings	133
Oil flow case 2: variable orifice flow	94	Track tuning	135
Oil flow case 3: mixed flow	95	Two makes one	136
Now for the fun part: gas pressure	96	Lap simulation programs	137
Friction dampers?	98	<b>16. Propulsion System Physics</b>	138
Adjustable Dampers 202: Speed Tuning	99	Gentle treatment	138
Cornering phase definitions: Phase 1	100	Power corrupts	139
Phase 2	101	Cooling control	140
Phase 3A	102	Acceleration optimization	141
Phase 3B	103	Air breathing	141
Phase 4	104	Paying for power	141
Effects of damper induced weight trans.	104	Gearing optimization	142
<b>14. Geometry Goals</b>	110	Upshift technique	143
Geometry parameter goals	110	Quickshift	143
Long wishbones	112	Racing with synchros	144
Realistic alignment	112	Downshift technique	144
Force based roll center heights	112	Speed data analysis	145
Virtual swingarm lengths	113	<b>17. Race Car Aerodynamics</b>	147
Bump steer	114	What’s going on?	148
Minimal anti-anything	114	The balanced approach	148
Minimal rising or falling rate	115	Balance stability	148
Motion ratios	118	Ground effect downforce	149
Front caster	118	Flat bottom aerodynamics	151
Front kingpin offset	119	Stall	152
Front kingpin angle	119	Drag sources	155
Front trail	119	Frontal area does not create drag	155
Constant anti-roll bar motion ratio	119	Induced drag	157
Front Ackermann	119	Pressure drag	158

## Think *Fast* – The Racer’s Why-To Guide to Winning

Multi-car aerodynamic interactions	159	The customers	168
Skin friction drag	159	The company structure	169
Maximizing the downforce to drag ratio	159	The boss	170
Engine breathing	161	The design team	170
Aerodynamic performance test methods	162	The manufacturing team	171
Computational Fluid Dynamics	162	The customers, again	172
Wind tunnel testing	163	<b>Your Turn</b>	173
Track testing	163	Hardware	174
Shooting Star Niner Romeo X-Ray	164	The driver’s job	174
<b>18. The Race Car Recipe</b>	166	The race engineer’s job	175
The Monday morning quarterback	167	Winning	176
Pick 2	167	<b>Postscript</b>	177
The program team member recipe	168
